EAV diagnosis

- **BRAIN**: the **hypothalamus** controls the hormonal system as well as the feelings of hunger and satiety.

- **EAM set programme**:
  Anatomy Latin – Systema nervosum – Systema nervosum centrale – Encepha
  lon – Telencephalon – Nuclei basales – **Corpus amygdaloideum (Amygdala)**.

- Other important parts of the limbic system: **Epithalamus, Thalamus.**
• Sometimes we can also find gluten intolerance during the testing.

• The condition is caused either by a real stress, a pressure on appearance and food intake (parents, friends), or – more often – by a style taken over from lifestyle magazines, society, etc.

• Most often, it is an immature, emotionally problematic personality.
In brain structures there can be tested:

- Microbial foci,
- Heterogenous substances,
- Pathological emotional programmes,
- Metabolites (in some cases).

NB! Avoid all dietary hints and recommendations. An anorectic person keeps to them fanatically.
Detoxification

1. VELIENDREN
   CRAN
   MIDREN

2. LIDREN
   EMO
   EVIDREN

3. METABEX
   HYPOTAL
   CORTEX
   METABOL
BULIMIA

• The opposite of anorexia. Emotional disorders are compensated by consuming a large amount of food, usually followed by vomiting.

• An apparent reason for this behavior are the remorses.
EAV diagnosis

• See anorexia.

• It is only an emotional variation of the personality – a type **predisposed to addiction** (alcohol, drugs, food).

• The causes are identical: an emotional discontent followed by accumulation of toxins.

• The detoxification preparations – see anorexia.
